

## Retis Redes, TI e Segurança Case

Full Band Parabolic Antennas (UHP-5800-30-06-DP)

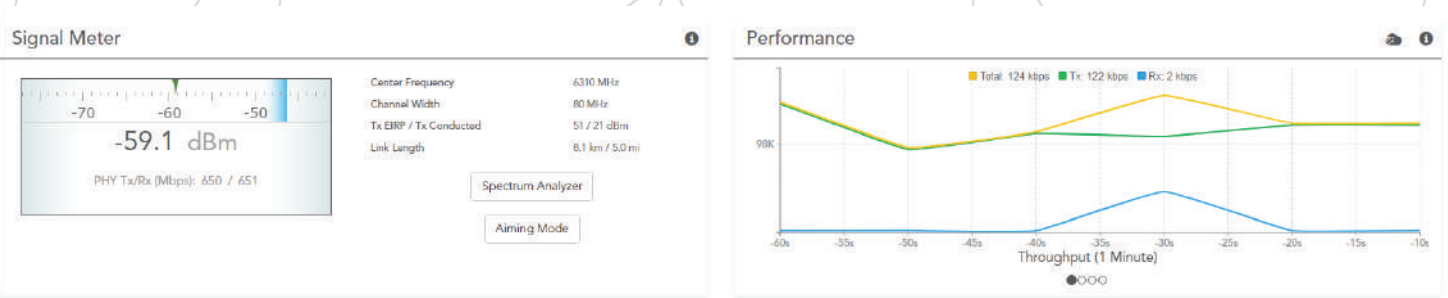

Point-to-point antenna with incredible bandwidth and excellent shielding.

Link: 9 km | 5.5 mi

Environment: high interference

Radio: Mimosa C5c

Throughput: 500 Mbps

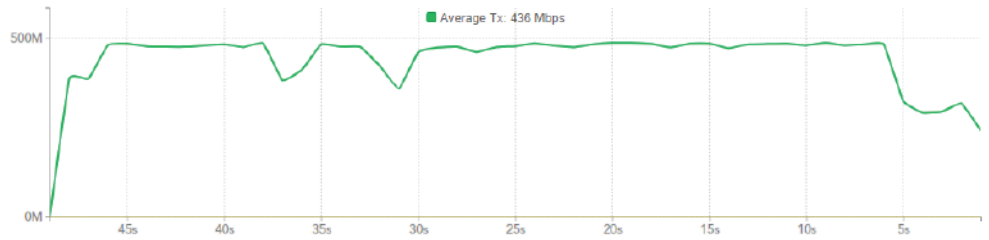

50  
(Allowed range is 10 to 600)

Test -

The bandwidth test generates 1,500 byte packets using a UDP-like protocol to saturate the link. The test traffic can impact network performance but is not included on the dashboard performance graph.

Navigation away from the bandwidth test page will automatically stop the test.
